

Abstract

5 A user interface and method are disclosed for facilitating analysis and/or planning of business operations. The user interface includes may include a plurality of user interface elements, at least some of which characterize associated components that may be employed to compute data. Stored account data is processed to generate base data for one or more selected accounts. The base data may be further processed by components associated with the user interface elements, such as by a method, key results area data, action plan data, and/or calendar data, to provide an impact value that results in the base data being adjusted accordingly.
